

My Inspiring Future Career As A Teacher

In my class kids learn reading and math
Science and social studies, we're taking a bath
In the knowledge we have though the numbers fight back
We shout "We will round you, so take that!"
I don't make much money but that's okay
I love my job anyway
I help kids know about the world
Tectonic plates and so much more!
I watch them grow up and when they apply,
What they know I am surprised
They remember what I taught them in 3rd grade
When they thought they knew everything!
I enjoy seeing what students make on the EOGs
So I know if they were listening
When a light bulb turns on I get excited
That they learned something new and I can't hide it
They work hard so at the end of the day
I read them books so their stress will go away
I see what they know
I watch them grow
And when they are successful they feel proud to
They feel proud to announce
Ms. Hudson helped me get here and I know that!
